

Floors and walls

Naturally slate – the building material for generations

natürlich!

MAGOG
SCHIEFER®

A stone accents interior spaces

 MAGOG slate – History

01

Slate, a building material formed by nature over millions of years, is today used to shape our modern habitat. Its elegant, natural appeal, its excellent combinability with other materials, and its extreme durability make this stone an ideal material to clad walls and floors. The range of applications for slate exceed far beyond these areas, however. The Magog slate quarry supplies special orders for tabletops and kitchen ranges, staircases, windowsills, doorsills, and window breasts, as well as covering plates for fireplaces and stoves and for kitchens and bathrooms. A perfect ecological material, slate is finding more and more friends in the private residential sector.

Magog slate – the natural stone for creative ideas

 MAGOG slate – Floor design

02

Slate combines beauty and durability; properties that are of special interest in connection with large floor areas subject to extreme wear and tear, for instance in public buildings. Building owners, architects, and planners use slate to shape representative areas with a high frequency of public visitors.

Magog slate – one stone, many possibilities

 MAGOG slate – Floor design

03

Magog supplies slab slate in virtually all shapes and sizes, meaning that there is practically no limit to creativity in the design of interior spaces. Magog delivers the slabs in their natural finish, in their rough-split state, or polished and would be delighted to advise you on the manifold individual laying procedure options.

Slate is a highly versatile material. Its colour, surface, and form fit in perfectly with all types of architectural application. Besides standard anthracite-grey Fredeburger Schiefer®, Magog also has coloured slate in its product range. The different colouring and nuances of the stone are the result of variations in the individual mineral constituents.

Slate floors – natural, elegant, unique

 MAGOG slate – Floor design

04

Slate, the natural building material, is ideally suited for creative interior architecture aiming at a high degree of individuality. Building owners and planners hold this stone in high esteem on account of its excellent combinability with materials such as wood and other types of stone. Over the years, the aesthetic properties of slate floors become ever more enhanced and lend it more character.

What's more, by its nature slate also stores heat: the stone absorbs solar energy and releases it into the rooms as a natural source of warmth. As an excellent conductor of heat, slate is the perfect material for laying on surfaces with underfloor heating.

Stairs made of slate are extremely durable. Using the natural rough-split surfaces gives staircases excellent non-slip properties.

Living with slate – lively surfaces give rooms character

 MAGOG slate – Wall design

05

Slate-clad walls give rooms a representative and individual character. Starting from a slab thickness of 10 mm, there are many formats available for cladding interior walls. No special surface protection is necessary. Our experts look forward to advising you regarding the applications of slate in your kitchen or bathroom, or as a tasteful interior decoration material, as table-top surfaces or stove plates.

Slate is the ideal material for your creativity. Let yourself be inspired!
